Product Notification - SLC4000-1 With Isolated 0-10V Output

06/21/26

Subject: SLC4000-1 with isolated 0-10V output

Details: The SLC4000-1-ISO is identical to the SLC4000-1 with the exception that the vernier output is galvanically isolated from the SLC4000 circuitry. This model uses the same firmware as SLC4000-1.

Recommended Application: The intended application for this model is for use with our Building Management Interface *configured for multiple boilers, especially for those with over 8 stages or in noisy electrical environments. This model minimizes circuit common EMI seen by each boiler*

For CLL configurations, continue to use the standard SLC4000-1-CLL, and SLC4000-1-ISO for the expansion units.

Ordering Information: Order part number SLC4000-1-ISO
